DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. Where applicant acts as his or her own lexicographer to specifically define a term of a claim contrary to its ordinary meaning, the written description must clearly redefine the claim term and set forth the uncommon definition so as to put one reasonably skilled in the art on notice that the applicant intended to so redefine that claim term. *Process Control Corp. v. HydReclaim Corp.*, 190 F.3d 1350, 1357, 52 USPQ2d 1029, 1033 (Fed. Cir. 1999).

The term “Raynolds number” in claims 1 and 2 is used by the claim to mean “Reynolds number”, while the accepted meaning is “Reynolds number.” The term is indefinite because the specification does not clearly redefine the term.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,463,257 A to Yea.

Art Unit: 2834

Yea clearly teaches the construction of a wind power machine comprising:

a plurality of blades (22) at every constant angles centering on a vertical rotating shaft (21) in a face orthogonal to the vertical rotating shaft;

wherein the blade is constituted by a blade type having a high lift coefficient, a low Reynolds number, and a notch portion (7) formed at a rear end portion of a lower face of the blade.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,463,257 A to Yea.

Yea discloses the claimed invention except for:

the Reynolds number falling in a range of 30,000 through 3,000,000;

the lift coefficient falling in a range of 1.0 through 1.4; and

the notch portion being formed from a position of 35% through 45% of a chord length from a front edge thereof over rear edge thereof.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to develop a blade with:

a Reynolds number falling in a range of 30,000 through 3,000,000;

a lift coefficient falling in a range of 1.0 through 1.4; and

Art Unit: 2834

the notch portion being formed from a position of 35% through 45% of a chord length from a front edge thereof over rear edge thereof;

since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
